

Bologna, Italy, 30/12/2020

## **LT Renewables continues its growth path in 2021 to consolidate its leadership in the photovoltaic sector**

LT Renewables, an Italian group active since 2001, that is a leader in the design, installation and maintenance of industrial and utility scale photovoltaic systems, increases its know-how and customer portfolio reaching over 500 MWp under management in Italy (also thanks to the acquisition of the EPC and O&M business units of Enerray S.p.A.), thus becoming one of the top 20 solar O&M providers in Europe.

LT can also count on a track record of around 800 MWp built around the world, of which around 200 in Italy distributed among projects on industrial roofs, greenhouses and shelters, as well as large photovoltaic parks with power ratings exceeding 10 MWp.

These references are integrated with previous experiences in projects of particular technical complexity, such as revamping activities, or of particular operational and financial complexity which have seen the Group as technical advisor and subsequently maintenance operator on behalf of major financial institutions.

Care, reliability, attention to safety and relationships with Customers and Employees, together with the financial solidity of the Group, the experience and the ability to manage industrial projects and complex construction sites, make LT Rinnovabili the ideal interlocutor to install and manage at best renewable energy plants of any type and power.

LT, Renewable. Reliable.
