

LT Care - a repair service dedicated to your photovoltaic system

A good perception of the critical issues related to the electrical and electronic components failures of a photovoltaic system could not exempt LT Renewables from integrating in its structure a new **engineering company specialized in the diagnosis and repair of electrical, electronic and electromechanical components.**

LT Rinnovabili is now able to operate directly on these components, meeting a growing market demand to manage components that are now obsolete and for which it is often difficult to find spare parts.

In particular, specialized repair and regeneration services have been implemented for the following electronic devices:

- **Modular and centralized inverters**, an activity supported by a wide availability of forklift inverters at the owned warehouses
- **Trackers**
- **Electric and electronic actuators**
- **UPS**
- **Electronic cards** through reverse engineering processes
- **Automation systems**

LT Renewables

Offices Via A. Manzoni 41, 20121 Milan - Via del Faggiolo 1/10, 40132 Bologna - Via C. Battisti 127/A, 74121 Taranto

Our customers can now count on direct and internal management of the activity with consequent optimization of repair times; not to mention the possibility of optimally planning regenerative and predictive interventions.

A further demonstration of responsibility and care.

Renewable energy is part of our DNA; it is the vision and passion behind our work. We started in 2001 with the management and maintenance of photovoltaic plants and quickly specialized in O&M contracts, data monitoring and analysis, developing a particular expertise in safety issues. From the beginning, we offered our customers relationships based on trust and transparency with a strong belief that professional relationships built between real people can make all the difference.

LT offers an innovative approach to the renewable energy management market: we're an experienced company, capable of developing and implementing projects from start to finish, adept at troubleshooting and problem-solving, working closely with our clients throughout the process.

With the acquisition of LT Enerray and SamsolT, two companies that represent Italian excellence in their respective photovoltaic and biogas sectors, the LT group has established its presence throughout Italy, becoming one of the main players in the maintenance of renewable energy plants.
